I. Academic research on Kahoot!

KAHOOT! IS MORE
THAN **ENGAGEMENT**

—
It improves student
learning outcomes,
knowledge retention,
motivation,
and more.

Research finding #1

Kahoot! boosts academic performance

A large body of research shows that Kahoot! significantly improves learning outcomes.

Meta-analyses of independent research reveal that using **Kahoot!**, on average, boosts academic performance on a typical test up by a *full letter grade*.¹²

WHAT THIS MEANS

Students who use Kahoot! tend to score significantly higher on tests and assignments compared to those who don't.

2. Kucirkova, N., Campbell, J. & Schewe, O. (2023). [Kahoot! Integrative Review of Evidence](#), Report for WiKIT AS.

Research finding #2

Kahoot! increases knowledge retention

Meta-research shows a **very large positive effect on retention** — a key measure of how well students remember what they've learned.¹

WHAT THIS MEANS

Using Kahoot! helps students remember information much better than traditional learning methods.

For educators, this is a game-changer! Better retention means less time spent reteaching old material, more time to introduce new concepts, and more efficient and engaging lessons.

Research finding #3

Kahoot! boosts motivation and participation

Research shows that Kahoot! has a **strong positive effect on motivation** and a moderate effect on **learning attitudes**.¹

WHAT THIS MEANS

Engaged students = Empowered educators.

Increased student participation, more productive class time, and greater willingness from students to tackle tough topics shifts the learning environment to be more positive, collaborative, and rewarding for everyone involved.
